PROFILE

Senior Backend Engineer with 5 years of experience building and running production products end to end with Node.js, TypeScript and AWS. At Infynect Labs (HEPI TV) I grew from Software Engineer I to Associate Principal Engineer, owning backend architecture, APIs and production delivery for the HEPI TV Hospitality platform, a cloud IPTV/OTT microservices platform, payment and recharge flows (Razorpay, PayU) and an enterprise integration backend. For the last two years I have integrated Anthropic Claude and OpenAI into production workflows. Comfortable across the stack with React.js and Vue.js.

TECHNICAL SKILLS

Languages & frameworks:	Node.js, TypeScript, JavaScript (ES6+), Express.js, React.js, Redux, Vue.js
APIs & architecture:	REST, GraphQL, WebSockets, microservices, event-driven design, serverless
AWS:	Lambda, API Gateway, SQS, EC2, ECS, ECR, EKS, S3, RDS, CloudFront, Route 53, IAM, VPC, CloudWatch
Data & messaging:	PostgreSQL, MySQL, MongoDB, Redis, Kafka, Nginx caching
Payments:	Razorpay (Node.js SDK, REST APIs), PayU, webhooks, failed-transaction handling, queues
AI & LLM:	Anthropic Claude, OpenAI, LLM integrations, AI agents, Claude Code
DevOps & quality:	Docker, CI/CD, PM2, Linux, Nginx, Playwright, Prometheus, Grafana
Streaming & platforms:	HLS, DRM, FFmpeg, CDN, Android TV, AOSP STB, Samsung Tizen / TEP, LG webOS
Security:	JWT authentication, role-based authorization, IAM least privilege

PROFESSIONAL EXPERIENCE

Infynect Labs Private Limited (HEPI TV) — Dec 2021 – Sep 2026

Bengaluru, India

Associate Principal Engineer (Senior Backend) · Aug 2025 – Sep 2026
Software Engineer II · May 2023 – Aug 2025
Software Engineer I · Dec 2021 – May 2023

HEPI TV Hospitality Infotainment Platform — in-room TV platform for hotels

- Designed and built the centralized Hospitality Infotainment Management Portal hotels use to manage in-room TV content and services.
- Built the HEPI TV Web App Launcher for Android TV and AOSP-based set-top boxes, and integrated Samsung TEP Hospitality Mode.
- Developed dynamic SDK reflection for HEPI TV apps and the Node.js services behind content, guest-service and device workflows.

Cloud IPTV / OTT Microservices Platform

- Architected the platform as independently deployable Node.js microservices, with the API layer on API Gateway and Lambda.
- Decoupled services with SQS queues and WebSocket channels, with retries and failure handling so one failing service does not stall the rest.
- Cut repeat load on origin systems with a two-tier cache: Redis for application data and Nginx for HTTP responses.
- Built the Subscriber Management System (SMS), ISP management REST APIs and reporting modules, and the Teraband ISP Management Portal.
- Worked across DRM, HLS, FFmpeg transcoding and CDN delivery; operated the production CDN (VPN, Linux Netplan, CDN-to-origin links).
- Shipped IPTV apps for LG webOS, Samsung Tizen and Android TV.

Payments & Billing

- Built payment flows for HEPI TV recharge, new set-top box purchases and direct guest payments for in-room food orders.
- Built IPTV operator recharge and customer self-recharge of subscriptions and individual channels.
- Integrated Razorpay (Node.js SDK, REST APIs) and PayU for billing and e-commerce order handling.
- Managed payment webhooks, handled error and failed transactions, and used queues for reliable payment processing.

AI & LLM Integrations — last two years

- Integrated Anthropic Claude and OpenAI into DRM, SMS, Transcoder and HEPI TV workflows.
- Built AI-agent capabilities and LLM-powered backend workflows for HEPI TV applications; use Claude Code daily for development, refactoring and test generation.

Enterprise Backend & Integration Platform

- Built Node.js and Express.js microservices connecting internal and third-party systems through REST APIs.
- Introduced Kafka for event-driven communication, replacing direct service-to-service dependencies.
- Designed PostgreSQL persistence and optimized slow queries; secured every API with JWT authentication and role-based authorization.

Cloud, Delivery & Production Ownership

- Deployed and ran services on AWS (EC2, ECS, Lambda, S3, RDS, CloudFront), locked down with IAM, VPC and security groups on least privilege.
- Containerized services with Docker and PM2; built CI/CD pipelines with automated testing, including Playwright end-to-end tests.
- Monitored production with Prometheus, Grafana and CloudWatch; owned troubleshooting, performance tuning and code reviews.

EDUCATION

Bachelor's degree in Computer Science — K.S.Rangasamy College of Arts & Science, Periyar University **2018 – 2021**
